Latest update:

APPENDIX 16

CONSEQUENCES OF CLIMATE CORRUPTION

This document is part of, and intended to be read in conjunction with,
all parts of and appendices to the document entitled *CSIROh!*

“We do not believe any group of men adequate enough or wise enough to operate without scrutiny or without criticism. We know that the only way to avoid error is to detect it, that the only way to detect it is to be free to inquire. We know that in secrecy error undetected will flourish and subvert.” J Robert Oppenheimer

We face simple choices. When politicians make poor and possibly corrupt policies it's our choice to either condone their actions running rampant over Aussies by doing nothing or instead to hold them accountable for the benefit of all Australians. When

Environment Minister Tony Burke* declares marine parks after glossing over the science and economic impacts we need to support Gulf fisheries families such as the Davies family, Cairns fisherman Bill Izard and marine biologist Walter Starck: <http://www.abc.net.au/iview/#/program/1026533> When scientist Jennifer Marohasy and barrister Josephine Kelly raise real Murray-Darling environmental issues ignored by the minister we need to support them:

<http://www.theaustralian.com.au/national-affairs/opinion/tony-burkes-murray-darling-plan-threatens-basin-farmers/story-e6frgdox-1226536999900>

And:

<http://www.theaustralian.com.au/business/legal-affairs/historic-link-shared-by-murray-darling-basin-and-carbon-tax/story-e6frg97x-1226325273552>

And:

<http://jennifermarohasy.com/saving-the-murray-darling/>

And:

<http://jennifermarohasy.com/>

* Tony Burke's full title is Minister for Sustainability, Environment, Water, Population and Communities. Australia's history reveals that's an odd collection of responsibilities under one minister. It does though mirror the focus of, and initiatives promoted by, UN Agenda 21. (Appendix 14) Tony Burke's actions raise the question: is he working for the people of Australia or for a UN agency?

The CSIRO is corruptly misrepresenting climate *science* and pushing global governance. In doing so CSIRO is harming Australians and Australia. Politicians are our representatives and need to take action to protect all Australians on our behalf. When our politicians won't fulfil their primary responsibility isn't it our responsibility as citizens of Australia to ensure politicians fulfil their responsibilities to us under Australia's governing document: our national constitution?

We first need to understand the issues created by corruption of climate science and by politicians misrepresenting science to advocate cutting human CO₂ production.

My declaration of personal interests was provided in this report's introduction.

<http://www.conscious.com.au/documents/additional%20material/Personal%20declaration%20of%20interests.pdf>

It lists five main aims of my voluntary work on climate as:

- Protect freedom
- Protect the natural environment
- Restore scientific integrity vital for sound, sustainable policy
- Protect the economy and security
- Protect the human spirit by ending unfounded climate fear and guilt while restoring our connection with Nature

Unfounded climate alarm endangers all five areas.

We're often told that the largest purchase of our life is a house. The second largest purchase is a car. Both statements are false. By far the biggest purchase of our lives is government. Typically in each week Aussies work from Monday to smoko on Thursday to pay for government taxes, fees, charges, rates, ... They consume 68% of our income. That leaves Thursday afternoon and Friday to pay for our mortgage, food, clothes, transport, entertainment, holidays, kids' education, ...

Imagine the lives we could lead by constraining inefficient, wasteful and deceitful government. Imagine if we could pay for effective government by working one day each week.

That's realistic. It would dramatically increase every Australian's wealth directly. Additionally, by compounding that increase through huge efficiencies multiplied throughout our economy and society it would increase every Australian's wealth indirectly.

All five aims above would be achieved.

How do you feel about the current biggest purchase of your life, government? Is **your money** well spent watching MPs slandering each other, doing backflips and spinning their way out of problems of their own making? Could you spend **your money** more effectively and get more done for Australia?

This appendix is not about a few hundred dollars a year after compensation from the government during the first year of its CO₂ tax. That Deceit Tax is designed to be increased rapidly in future years with NO compensation. This appendix is about much more. It's about thousands of dollars stolen from each family and individual every year by wasteful, unaccountable government.

It's about more than thousands of dollars of our money stolen and wasted every year. It's about our way of life and basic freedoms. It's about our lifestyle. It's about whether or not our kids will be able to afford a home.

The consistent theme continually emerging is the ever-growing burden on family and individual taxpayers. This is an economic and regulatory burden. Its cost increases further by stifling personal enterprise. The solution is low taxation to drive low government spending. Lower tax restores choice to people on how to spend our money.

The following partial list of specific issues begins with some of the most obvious problems being caused by government:

- Unfounded government and federal opposition claims of global warming due to human CO₂ are deceitful. Nature alone determines the level of CO₂ in air. Cutting all human CO₂ production cannot reduce CO₂ levels. Even if we could reduce CO₂ levels in air, that won't lower temperatures. If we could affect CO₂ levels we'd work to increase them. That would be highly beneficial. See Appendix 4. Taxing CO₂ is like taxing oxygen: every molecule of CO₂ needs two atoms of oxygen. The Deceit Tax is a tax on a key ingredient yet cannot have any effect on changing CO₂ levels. It's theft based on corruption deceitfully pushed by **our** government;
- Economic destruction through an unfounded tax and *trading* scheme based on lies and deceit. Higher electricity prices and fuel prices will hurt every area of Australia's economy and further erode our international competitiveness in all industries, especially manufacturing, fisheries and farming. It's accelerating Australia's industrial collapse;
- Kills jobs in industries that came to Australia because of our low energy cost: <http://www.theherald.com.au/news/local/news/business/hundreds-of-jobs->

to-go-with-closure-of-kurri-smelter/2565786.aspx This is occurring at CO2 prices much lower than those pushed by the Greens and some Labor MP's;

- Taxes and charges erode people's wealth. Never before in Australia has government been given an open-ended upward-ratcheting tax. Future increases will not be offset by compensation. Then families will feel the pain of a tax that the government admitted is designed to hurt people to change our behaviour;
- Government encouraging exports of clean Australian coal to our competitors while stifling use of the same coal within Australia. Our manufacturing and other competitors overseas are given further advantage over Aussie producers. Listing the products of burning Aussie coal reveals stupidity of cutting CO2: <http://carbon-sense.com/wp-content/uploads/2012/07/is-coal-dirty.pdf>;
- CO2 is not pollution. Yet it's deceitfully claimed to be. After falsely labelling it as pollution politicians say we can pollute so long as we pay. Then they say that we can buy credits from international bankers. The international banks win, again. People lose, again. Plus, we pay income tax along the way as we earn a living to pay for CO2 credits. Appendix 14 reveals that corrupt national governance relies on fear, debt and tax. Yet if we don't do it, governments fine us or shut us down. Regulations, rules and restrictions;
- The CO2 tax is levied using bureaucratic formulae, not actual measurements of CO2. This opens the possibility of constant manipulation of the tax;
- Tony Blair's socialist British government did preliminary work on a personal CO2 tax. What formulae would that need? Would fat people pay more or less tax? Short people? Women? Kids? Pets? Vegetarians? Smokers? Athletes?
- Families and individuals carry Australia's tax burden. Around ninety percent of large corporations evade paying tax in Australia despite using infrastructure paid for by taxpayers. They're bludging off Australian taxpayers: families and small businesses paying for infrastructure. That's why families face cost of living pressures as governments struggle to pay for their ever-expanding waste and corporations assist little if at all;
- Taxation is plunder established to pay interest on loans concocted by banks out of nothing. To the cost of products add other taxes such as payroll tax. Then add CO2 Deceit Tax. Then add GST. Wait, are we paying GST on the CO2 tax?
- The biggest cost burden on Aussie families is the international bankers' money fraud. It costs each of us thousands of dollars every year directly in taxes. Indirectly it costs each of us thousands more in inefficiencies and lost opportunity for generating tangible wealth. International bankers create massive amounts of money out of nothing yet pay no tax on it (Appendix 14);
- Yet government now wants to tax us for producing Nature's trace gas essential for life on Earth, a gas whose level in air is determined by Nature alone. They want to tax our livestock for farting. Are our farts next?
- Chokes poor nations. Higher costs imposed by CO2 taxes and *trading* schemes handicap third world development and slow the ending of poverty, one of the greatest threats to the environment. That's inhumane. It's antihuman;
- Canadian environmentalist Lawrence Solomon reveals environmental damage from CO2 *trading*. **"But Kyoto (CO2 trading) is not an insurance policy. Just the opposite, it is the single greatest threat today to the global environment, because it makes carbon into currency. Carbon is the element upon which all living things are built. With**

carbon a kind of currency—which is what all carbon taxes and carbon trading and similar schemes do—all ecosystems suddenly have a commercial value that makes them subject to manipulation for gain." Add to that the enormous unmeasured humanitarian damage;

- As Australians needlessly lose their jobs and as industry continues transferring overseas, harmless CO₂ production moves overseas to less efficient nations. That is an economic concern. The environmental concern is that those nations use older technology. That produces an increase in real pollutants such as nitrous oxides, sulphur dioxide, carbon monoxide, other toxins and particulates (smoke). These real pollutants are currently removed in modern, efficient Australian combustion plants. The Australian government's actions hurt Australia's economy and hurt the global environment;
- Distorts industry across Australia due to taxpayer-funded and debt-funded subsidies;
- Massively distorts through unjustifiable and damaging subsidising of uneconomic wind-power and solar power already destroying regional economies, wealth and employment. Actions adopting these inefficient and costly fantasies waste resources, destroy economic wealth and limit personal enterprise <http://carbon-sense.com/wp-content/uploads/2011/06/brics-vs-pigs.pdf> and <http://www.juandemariana.org/pdf/090327-employment-public-aid-renewable.pdf> and <http://www.slideshare.net/JohnDroz/energy-presentationkey-presentation>
- Costly misallocation of resources—including precious water—across society;
- Wastes water and resources and diversion of food production to ethanol under government subsidies. This increases pressure to clear more land for farming;
- Threats to lives due to unfounded climate alarm hiding real natural weather events such as fires, floods and droughts. Research into those events is sacrificed in favour of grants to investigate CO₂'s supposed impact on global climate;
- Corrupting science increases ignorance, one of the greatest environmental threats (Appendix 14);
- Income redistribution from wealthy nations to developing nations. They're being bribed with supposed *compensation* for CO₂ falsely claimed to cause climate change. The UN relies on and buys murderous and/or thuggish undemocratic dictators' votes. The bureaucratic, wasteful, dishonest UN seeks a global tax on CO₂. That is to be its independent revenue as part of achieving its goal of global governance. Appendix 2 (UN IPCC) reveals UN IPCC corruption and flawed thinking;
- Drives CO₂ *trading* schemes enabling greater use of derivatives already threatening to collapse the global economy;
- UN Agenda 21 deepens socialism. Europe's economic mess is due to socialist policies worsened by unscientific imposts on CO₂ and alternative *energies* that are proving to be *alternatives to energy*. Australia's economy is threatened;
- Corrupts science and politics leading to further dubious and/or corrupt actions. History shows that when government deliberately or negligently condones corruption, corruption spreads. When government initiates corruption it spreads more quickly and without control or limit. Government corruption drives corruption by vested interests. Consider that federal Minister for Climate Change and *Energy Efficiency* Greg Combet misrepresents climate, energy, efficiency and taxation. He has ties to the union

movement and his former directorship of a union-owned superannuation fund now benefitting massively from government subsidies while destroying energy efficiency and energy security. This raises serious questions. Appendix 12;

- Encourages use of mischievous SLAPP lawsuits that abuse the legal system in an effort to constrain free speech and activities to silence climate sceptics. Taxpayers sometimes indirectly fund SLAPP lawsuits. These have been used by those pushing or depending upon unfounded climate alarm;
- Enables and encourages massive fraud in European CO₂ *trading* markets;
- Pushes government corruption triggering use of government advertising and media spin in an attempt to hide the truth, massage facts and spin new stories. Taxpayers pay again. Governments of both major political parties waste hundreds of millions of taxpayer dollars;
- Ballooning government debt to be paid by taxpayers and future generations. Increases debt. Each dollar of taxpayer-funded *renewable* energy subsidy is another dollar of loans owed by taxpayers and future taxpayers to international bankers. It's driven by attempts to control people;
- Government spending and borrowing reveals the core problem is the massive and ever-growing size and burden of government at the expense of the people, particularly the poor;
- Destroys confidence in government and in the opposition;
- Destroys Australia's national governance. A combination of ignorance, misinformation, overwork, weakness and apathy among MPs enables powerbrokers and vested interests to control parliament. They tap faulty systems driving counterproductive behaviours in political parties and in parliament to unlawfully steal control over the nation;
- Cedes Australia's sovereignty to international bodies. Already our national science bodies—the CSIRO and BOM—have ceded authority to their UN IPCC masters driving content of reports funded by Australian taxpayers;
- The Gillard-Brown CO₂ *trading* scheme is locked into the European Union's CO₂ price. UN Agenda 21 aims to cede control of land and energy to UN conventions. Australia's governance and national sovereignty is already being ceded to UN treaties;
- Helps create global control by a small unelected group of financial interests through undemocratically imposed global governance;
- Bypasses Australia's constitution;
- Weakens states' rights to effectively end the Australian federation. Our federation is the key to Australia's sovereignty;
- Centralises power in one ever-growing federal government taking control of Australia while implementing foreign policies not endorsed by Australians or their parliament and hurting Aussies;
- Destroys science. The *appeal to authority* is revealed by unqualified reliance on opinions and beliefs of supposed *experts* and supposed *scientific* bodies. It's pushed by UN bureaucrats and Australian politicians. This has replaced the *appeal to reason* and objective scrutiny. The interlocking network of corrupt bodies is such that when any single organisation is identified as unscientific, the others are cited and the issue blows over. Science is the victim and the people pay the price;
- Destroys science to end the Age of Enlightenment. Science gave humanity objective decision-making to replace the rule of the bully and the powerful. As

science dies, objectivity dies with it. This restores control by bullies, albeit now using taxpayer funds to control propaganda;

- Diverts people's time, attention, resources and energy onto a non-problem conjured by a political agenda. This prevents addressing real environmental and humanitarian challenges. It limits addressing real pollution. It prevents scientific development and sharing Nature's blessings with all humanity;
- Increases poverty and ignorance as science and objectivity are trashed. Objective science and freedom are responsible for lifting billions of people out of poverty. Science driven by free minds gave us our present safety, security, efficiency, lower and more efficient specific resource use, comfort, longevity, ease, entertainment, information, connections, nutrition, health, independence from Nature's variation in crop production, ... and many other things we now take for granted. Yet these were not available to royalty just 150 years ago. The UN, international bankers and Australia's major political parties want to reverse one of our most valuable gifts;
- The same people through deceitfully hijacking science caused the deaths of tens of millions of people;
- Wars driven and supported by international bankers during the last century and ongoing antihuman practices pushed by the bankers' repeatedly stated aim to cut population have cost hundreds of millions of people their lives. International bankers made profits by supplying loans and armaments to both sides during the first and second world wars;
- Destroys future security as people become more dependent on government and as science is trashed;
- The international financiers' money scam is threatening global economic collapse;
- Rampant deceit hides economic misery, threats and serious problems delaying the lifting of humanity and threatening freedom;
- Other nations and states dump CO2 taxes/*trading* and/or state they will NOT adopt such schemes and/or continue bypassing their schemes by giving industry exemptions. Yet Australia has just jumped on the dead-end path;
- Destroys personal freedoms through control of energy, resources, finances and private property using taxes, rules, restrictions and regulations;
- Demonises those who disagree with the government's CO2 taxation agenda or who work in industries that are Australia's lifeblood. eg, coal mining, electricity generation, ...
- Antihuman policies spread by the UN, NGO's such as WWF, Australia's champagne Greens, elements of both major parties, state and federal school curricula, university academics, ... These enormously damage the psyche and spirit of people, especially children. (Antihuman myths and ideology seek control over people and paint humanity as evil. Yet personal observations in many nations combined with data from Robert Zubrin and Matt Ridley and many others triumph over myths and ideology. They provide abundant solid evidence of humanity as deserving trust and freedom. The data give hope for a world energised by honesty and by objective science. These are freedom's allies;
- Everything in our society comes from the ground and to a lesser extent from the ocean. Everything begins as a mineral or as a crop. Yet, in their attempts to control resources NGO's and government demonise mining, farming and fishing;

- Extreme eco activists have become modern terrorists. They foment fear to sap the heart and soul, particularly by preying deceptively on school children;
- Over-government and government over-control are intruding into and restricting every aspect of our lives. Many people are being weakened and made dependent. That can be pleasant in the short-term yet is destructive longer-term as many of Australia's indigenous leaders now acknowledge. Government control kills creativity and diversity. Instead of millions of hearts and minds thinking freely and building ideas off each other, we come to rely on the remote bureaucrat choked by his political masters' fear of making embarrassing errors. Bureaucrats choke the free trade of ideas in which people's ideas build on others' ideas. Bureaucracies contain no way of objectively measuring progress and effectiveness of decisions. Such measures are automatically part of true markets;
- How can we trust MPs stealing farmers' and coastal residents' property rights to smash freedom based on unvalidated and unscientific computerised numerical modelling. Those models contradict empirical scientific evidence and mirror population control programs discussed in Appendix 14? <http://www.smh.com.au/environment/conservation/federal-wildlife-corridors-plan-heading-in-the-right-direction-20121104-28rz9.html>
- Science corrupted becomes politics deceitfully wrapped in pseudo-science. It's a tool for control over others.

Why are we allowing this insanity? Government deceit has taken advantage of people's trust. Appendix 14 reveals government deceit to be driven by international financial interests seeking global control. It's about money and their exercising control over we, the people. It's extremely damaging to people and to our nation. It's designed to end our nation, as Henry Lamb reveals in his succinct and comprehensive five-part video:

<http://shelf3d.com/Search/The%2BRise%2Bof%2BGlobal%2BGovernance%2BPlayListIDPLKjJE86mQRtsd2abcjQkgq4uw-H5MLvMa>

Three groups exist in society:

1. Government group. This growing group includes MPs and public servants;
2. Beneficiary group. This growing group receives money from government; and,
3. Paying or Productive group. This shrinking group pays for all the programs.

Although governments have claimed to be fairer at redistributing wealth history shows that central control always destroys wealth creation. Central control kills wealth and brings poverty because millions of independently creative hearts and minds are thwarted and replaced by a few bureaucrats often focused fearfully on maintaining control.

Their ignorance of basic human behaviour and history is astounding. That so many people could fall for it is even more astounding. That people are awakening is refreshing.

The issues listed above are inter-related. Few can be solved in isolation. Fundamentally all are driven or exacerbated by the same source: globalists pushing global control on behalf of international financial interests pursuing narrow vested

interests and control. They're able to do this through complicit deceitful national government in Australia. The same applies in America. (Appendix 14)

One of the first steps to eliminate greed driving international bankers and their national and global politicians as agents is to stop protecting their greed with our silence. We need to expose their greed. Rats and cockroaches do their work in the dark. When the cupboard door is opened the vermin scamper away. Shine the light on prominent international bankers' theft, deceit, genocide, murder and betrayal of humanity.

Unfounded climate alarm, the banking scam and antihuman ideology and policies are not the only challenges and opportunities. In speaking across Australia I've learned of other issues including the need to: protect private property rights, restore Australia's constitution, end local government's unlawful taxation, restore freedom of speech, restore common law, restore individual freedom and rights, investigate what some refer to as the name fraud, end corruption reportedly existing in some courts, ...

Protecting freedom

Understanding motives and identifying beneficiaries reveals destruction of freedom as the most serious threat we face.

Today, freedom is under attack. Farmers and coastal property owners have lost freedom. Without paying compensation, government has stolen their private property rights. The consequent discomfort and suicides among farmers are tragic. Coastal residents are suffering falls of 40% and more in property values and enduring great uncertainty. Yet both sides of politics dither and walk away from the obvious issue: orchestrated corruption of climate '*science*'. The theft of private property rights is based on corruption that contradicts empirical scientific evidence.

The theft of property rights and loss of freedom was initiated by the federal government under both political parties. It's occurring with the complicity of state and local governments. It's occurring despite many MPs at national and state parliaments being sceptical about the supposed climate '*science*'. It's occurring despite all federal MPs being advised repeatedly from many sources that sound empirical scientific evidence contradicts their parties' position. Federal politicians have been repeatedly advised of climate *science's* massive orchestrated corruption. (Appendix 12)

National governance has been smashed as politicians abdicate their responsibilities to voters and to the community, fail to do their due diligence and show lack of character. Who can the people rely on?

Kevin Rudd, Penny Wong, Julia Gillard, Wayne Swan and Greg Combet enabled the UN's massive corruption of climate science. They were assisted by Rob Oakeshott, Tony Windsor, Malcolm Turnbull and Greg Hunt. All disregard and contradict comprehensive empirical scientific evidence. All ignore document corruption of climate science.

In addition to the attack on personal freedom in Australia, our freedom as a sovereign nation is under attack by UN treaties. Since we, the people, hold the power

to change our constitution, we are in effect the sovereigns. Yet the people's sovereignty is being smashed, supplanted by control under UN bureaucrats and international treaties bypassing the people's houses (parliament). They're implemented deceitfully using money appropriated by government agencies. (Appendix 14)

This is undemocratic. It deceitfully breaches the spirit and intent of our constitution. It's destroying our nation that had, during its early decades succeeded because of Aussie inventiveness, resourcefulness, fairness and mateship under arguably the world's best constitution.

Aussies punch above our weight in science, sports, war and many human activities. That is under threat. Instead of enjoying and sharing the fruits of our creativity, initiative and work, the UN is stealing our labour. The UN is converting us into slaves for its masters, the global banking interests and their corporations through which they wield control over citizens.

As our nation sinks more deeply into debt, it enslaves future generations and us. It enslaves our kids.

State governments have blown billions of dollars building desalination plants after unfounded scares from academic advocates of cutting human CO₂ falsely implied that Australia's recent drought would never end. Those academics are funded by government. Their falsities are spread by the ABC network funded by taxpayers.

Consequences of the 2011 Brisbane floods appear to have been worsened needlessly by fears of endless drought as the state government tried to maximise water storage at the expense of flood mitigation at Wivenhoe Dam. The latter was constructed primarily for flood mitigation following the 1974 Brisbane flood.

Agenda 21 is already being implemented deceitfully in Australia.

Massive improvements to our management of humanity's impact on the natural environment have been possible due to the use of high-energy-density fuels containing carbon. These have dramatically increased resource productivity to reduce per capita consumption below what it would otherwise have been. Fuels containing carbon and uranium removed the exploitation of animals such as whales and beasts of burden. They led to unforeseen gains in economic wealth enabling investment in scientific research, the arts and studies of society.

Already under the new regime of supposedly *renewable* energy policies economies are being smashed around the developed world from Spain to California. Australians are already seeing rapidly rising energy costs due to unscientific and unfounded *renewable* energy targets and the unfounded Deceit Tax on CO₂.

Job losses in Spain have led to unemployment of 28% as industry flees to other nations.

<http://www.theaustralian.com.au/news/world/spain-unemployment-rate-shoots-to-record-high-26/story-e6frg6so-122656122934> Australian job losses continue mounting as a result of UN treaties such as the Lima Declaration underway for almost 40 years and destroying our manufacturing base, agriculture and fishing. This

is now being worsened by regulations restricting usage of energy and by *renewable* energy burdens and the CO2 tax.

“UN IPCC Chairman Dr. Rajendra Pachauri illustrates the insanity of the position advocated by Maurice Strong. Quoting Dennis Ambler on Dr. Pachauri: *“He was effectively saying that the West should de-industrialise and let developing nations industrialise in the interest of solving poverty. This has also been a long stated aim of his friend and colleague on many boards and institutions, Maurice Strong.”*

http://scienceandpublicpolicy.org/images/stories/papers/originals/pachauri_and_the_ipcc_no_fossil_fool.pdf

Their plan for bringing developing nations out of poverty is to plunge developed nations into poverty. That is not only antihuman, it contradicts history. Development is not a zero-sum game. Instead, the more wealth that’s generated, the more there is to share.

Australia’s industrial base is being smashed. Ownership of the little that remains is being rapidly transferred overseas as international corporations enjoy the benefits and efficiencies from bludging off Australian families and small businesses paying for infrastructure. International owners avoid paying their share of taxation while using our infrastructure and the products of our education and health systems. Local companies pay taxes not paid by their international competitors operating within Australia.

What remains of Australia’s industrial base is being distorted by a new CO2 tax that dishonestly contradicts science to skew future investment in vital sectors like electricity generation. It’s designed to be increased hugely and quickly in future as an upward-ratcheting, open-ended tax. It holds us hostage to unreliable and highly variable output from *renewable* energy.

Our nation has an enormous competitive advantage in world markets: productive and committed people combined with low cost, reliable, environmentally responsible and easily accessible electricity produced by our abundance of clean coal. Yet our economic base is being destroyed. What remains of it is being economically jolted, skewed and distorted.

As John MacRae said: *“They’re asking us to live off the crumbs of a rich man’s table. We once owned the table and the loaf. (Australia being the table, money the loaf).”*

As Australians needlessly lose their jobs and as industry transfers overseas, harmless CO2 production moves overseas to less efficient nations. That’s an economic concern. The environmental concern is that those nations use older technology. That produces an increase in real pollutants such as nitrous oxides, sulphur dioxide, carbon monoxide, other toxins and particulates (smoke). These real pollutants are currently removed in modern, efficient Australian combustion plants. The Australian government’s actions hurt Australia’s economy and hurt the global environment.

Australian costs are rising as government imposes enormous costs on our own fuels yet enthusiastically encourages their export to our competitors.

A tax based on corruption and contradictions produces multiple inconsistencies. After the CO2 tax was imposed the Brisbane City Council (BCC) advised that rates

would rise. Unlike many other major cities in Australia and worldwide Brisbane's metropolitan area is in one city council. Although Sydney has around three times Brisbane's population, Sydneysiders live across many separate councils. Each is far smaller than the BCC.

The federal government arbitrarily determined Australia's top 500 CO₂ producers would pay the tax. Actually they really decreed that the top 500 producers would pass the tax on to their customers and ratepayers. Unlike Sydney councils where the NSW government runs buses, trains and ferries, BCC runs buses and ferries. It conducts waste disposal over one of the world's largest council areas.

None of Sydney's many small councils is among Australia's top 500 CO₂ producers. BCC is among the top 500. Sydney residents are not be hit by the CO₂ tax in their rates. Brisbane residents are hit by the CO₂ tax. Residents in both cities use the same services yet residents of only one are hit by the tax. Is this constitutional? Is it fair? Is it sound? No. The federal government's action is unfounded. It's deceitful. Its consequences are painful.

Economic consequences and insanity are further discussed here:
http://www.galileomovement.com.au/economics_hypocrisy.php

Corruption of climate *science* is seriously eroding confidence in science. The eco-extremists frequently wrap ideology in pseudo-science. That's tarnishing confidence in science and in policy claimed to be based on science. Serious questions are being raised about supposed *science* underpinning the Murray-Darling Basin plan.

The fishing industry is being devastated directly and indirectly through needless restrictions and costly impositions and regulations contradicting empirical scientific evidence. Farmers face imposition of needless and avoidable costs.

Objective science freed humanity from the ravages, blight and misery of the Dark Ages. Now we are experiencing a return to the Dark Ages as pseudo-*science* is combined with spin and propaganda to replace the jack-boot and rifle as means of control and indoctrination. The consequences of returning to rule by bullies with the loudest voices, intimidation and deceit are loss of freedom and destruction of objectivity, integrity and fairness.

Another casualty is the genuine environmental movement, one of Earth's most important movements. By linking unfounded and unscientific climate alarm with the environmental movement, the latter is being tarnished as non-government organisations such as Greenpeace and WWF and the Australian Greens are exposed for their corruption of the environmental movement.

Funding for real environmental and humanitarian challenges is being diverted to falsely concocted climate alarm.

People care about the environment. That care is inherent because we arose within, and remain part of, the natural environment. The greatest human threats to the environment are not greed or lack of care among the masses. The greatest threats are war, poverty and ignorance. (Appendix 14)

War. No Environmental Impact Statement is produced before war is declared. War is the result of efforts to control others. It is often a magnification of ego and/or of fear. Respected American former congressman Ron Paul reveals that every major war since formation of America's privately owned Federal Reserve Bank in 1913 has been caused by its owners—the international bankers.

Poverty. People trapped in poverty scrounging their next meal lack the resources, time and knowledge to make the environment a priority.

Ignorance. Humans care. Once most people become aware of a serious threat to the environment we respond by changing our ways individually and collectively as a society or nation.

The UN and international bankers have a proven record of causing and/or exacerbating war. They perpetuate poverty and dependency by spreading failed socialism. It thwarts initiative as individual ideas are suppressed by bureaucratic edicts. Socialism has failed. It erodes responsibility and kills property rights. Stealing the rewards of initiative stifles initiative.

Aided by international bankers, The UN has a record of suppressing and corrupting science for ideological ends. That suppresses development of new knowledge and destroys existing knowledge. From 1972 through 2006 its policy toward DDT killed more than 40 million people. That places deaths due to UN policies knowingly contradicting empirical scientific evidence in the league of the world's worst mass-murderers: Hitler, Stalin and Mao.

As explained previously and in other appendices, the UN and international bankers are the single greatest threat to the global environment. As they seek to develop a new currency in CO2 credits trading on thin air it condemns their goal of global control. Their strategy involving antihuman and antienvironment actions is darkened by their deceit toward all peoples of Earth.

Unfounded fear and needless guilt are being spread by eco-extremists. They base their falsities on Malthusian doctrine and ideology contradicting facts and observations. They infect our children, politicians and many adults with debilitating fear and cancerous guilt. They destroy the confidence of Australia's future leaders. They wreck children's future security for one purpose: control.

Our education system is being used to push ideology that contradicts human nature and scientific reality. Rockefeller made changes in education during the 19th century to dumb-down people, increase their dependency and malleability and instil subservience to authority. (Appendix 14)

Typically teachers enter teaching because they care. Typically bank tellers enter banking to serve fellow citizens and earn a living. Neither group is aware of the major international bankers and their enslavement of taxpayers by government debt.

Just as bank staff are not aware of the damage done by international bankers, many teachers are not aware of damage to themselves by bureaucratic systems that stifle development of improved and more satisfying education processes and systems.

To illustrate the benefit of freedom, compare stagnation in East Germany since World War II with progress in West Germany. Both nations shared the rich Germanic tradition of hard work combined with technical prowess and industrial strength. Yet for 40 years, East Germany managed only to produce the pitiful, dirty Trabant car at great expense and low availability. At the same time West Germans produced BMWs, Mercedes, Porsches, Audis, VWs and Opels.

The West Germans did so despite controls and limits imposed by international bankers. They did so because personal freedom was alive in West Germany. The bureaucrats were prevented from total control.

If education was freed from the shackles of bureaucratic control and teachers' union control it would tap the creativity and initiative of all in the education industry. Imagine the dramatic improvements. Education could be lifted from Trabant-like to Mercedes-like. Teachers would have greater satisfaction and likely enjoy higher salaries and greater recognition from caring for our planet's future citizens and leaders.

Australia is being converted to the rule of the bully wielding the statute book imposing rules, regulations and restrictions and wielding taxpayer funded spin. Our lifestyle is severely threatened. Progress is being thwarted. Efficiency is being reversed.

This is not reform. It's dishonest, irresponsible bullying by deceitful politicians abetted by weak politicians. National governance has been lost to party powerbrokers who are being transformed into puppets of UN bureaucrats, treaties and international bankers.

Instead of using our technology and Aussie inventiveness to assist in lifting the third-world, Australia is rapidly being converted into a third world nation. The badge of our developed status—the middle class—is being smashed.

We are ceding national sovereignty. We are ceding our future to control freaks hiding behind deceitful false agendas, pseudo-science and corruption wrapped in eco-speak.

The UN has a record of antihuman and at times barbaric and genocidal behaviour. Australia deserves better.

Yet as science graduate and journalist Jo Nova says, quote: *"The incentives are so skewed in favour of finding crises, that the IPCC could produce predictions that were outrageously wrong (where the actual temperatures for two decades fell below their lowest baseline) and western governments would still say "we're convinced in the IPCC's ability to predict global Armageddon". (How do I know? It happened already.)"*

Insanity fuelled by deceit is rife in Australia's government. Our governance—under government and opposition—is impotent or possibly wilfully negligent in being led by a small group of powerbrokers. We citizens have handed our power and given our faith to massive government intruding into every aspect of our lives. *It's lying to us as it smashes our future and cedes our sovereignty.*

We are responsible for allowing that demise. Correction requires first that we take responsibility and secondly that we take action to recover our country and protect our way of life, restore science, protect our natural environment, protect our economic security, protect our children, protect our future, restore our integrity, protect our freedom.

Taxation is plunder established to pay interest on loans concocted by banks out of nothing. We need to cut government by cutting taxation dramatically to end government waste and, more significantly, end government's massive inefficient distortions in every aspect of our lives. All Australians would benefit from vastly increased national and personal wealth.

That a group of socialists trying to control humanity globally considers it a worthy goal to impoverish people by destroying creativity and freedom reveals the depth of their ignorance, inhumanity and/or callous disregard for human life.

Freedom is the key to creativity, initiative and responsible productive action. Freedom is the key to exchange of ideas and thereby building upon other people's ideas to develop a better world for all.

We need to restore the opportunity to freely share and implement ideas. We need to restore Australia's proud heritage so that Australian resourcefulness and fairness create our wealthier and cleaner future.

On a personal matter, note that Jo Nova operates her website and blog herself without government funding and relying on donations and savings. Like me and my wife and family it has cost Jo Nova and her family thousands of dollars and sacrifice to family plus hundreds of thousands of dollars of foregone income.

Government is stealing money from taxpayers to justify stealing more money from taxpayers via CO2 taxing and *trading*. Yet taxpayers/citizens like Jo Nova and hundreds of other people are scouring government propaganda to restore scientific integrity. As the government deceitfully steals our money we work voluntarily for free and at great cost because we believe in integrity.

Consider the waste as taxpayers and scientists are distracted from productive pursuits to improve Australia's efficiency and international competitiveness. Instead we work on restoring governance and integrity. This is a massive cost of modern western government as party politics and media capture and hold entire countries hostage to deceit.

One advantage is that government deceit is building awareness and responsibility in the citizenry and voters.

Both Australia's main political parties need to summon the courage to admit their error and to start serving the people.

That so many citizens are awakening and voluntarily working on exposing climate corruption is encouraging and gratifying. It gives hope for ending unfounded climate alarm and corruption and for restoring our country's security and our future.

We can achieve that by first identifying the three main issues:

- Climate corruption is huge and threatens humanity, our country and us;
- International bankers drive and control their money fraud hijacking our country and causing widespread pain globally;
- Corruption of human consciousness with unfounded fear and guilt is toxic. The bankers are not satisfied with gouging us. They want complete control globally over our lives via methods that are antihuman, antienvironment and antiNature.

Australians need to stop being trusting sheep. Instead, let's restore Australia to riding on the backs of four-legged sheep. Our primary producers—farmers, fishers, miners—and our manufacturers are among the world's best. We can restore Australia—together.

"A nation of sheep will beget a government of wolves."
Edward R. Murrow

"The punishment which the wise suffer who refuse to take part in the government, is to live under the government of worse men."
Plato:

"Optimism is the faith that leads to achievement. Nothing can be done without hope and confidence."
Helen Keller

As shown in Appendix 12 and elsewhere, Greg Hunt's position on global warming is untenable. That has not stopped him though from analysing scrapped ALP programs. Such immense governmental waste and confusion is expected when policy is based on perceived popularity and/or ideology rather than scientific facts:

Title: *After Sandy, No One Lined Up for Wind Turbines*

The greens want to go 'beyond oil,' but without it we'd freeze in the dark.

Quote: “Assume the hospital needs one megawatt of emergency electricity-generation capacity. Lives are at stake. It needs power immediately. That capability could easily be provided by a single, trailer-mounted diesel generator, which would occupy a small corner of the hospital's garage (and be safely removed from any flooding threat). By contrast, providing that much wind-generation capacity would require about 5.6 million square feet of land—an area of nearly 100 football fields. And all of that assumes that the land is available, the wind is blowing, and there are enough transmission lines to carry those wind-generated electrons from the countryside into Lower Manhattan. This year, some 222 million engines will be manufactured around the world, according to Dennis Huibregtse of Power Systems Research. Those engines will power everything from hedge trimmers to supertankers, water pumps to generators. Every one of them will run on refined oil products. Sandy left millions of East Coast residents in the cold and dark. If any of them have been demanding “green” energy, I haven't heard about it. In the storm's aftermath, the most hopeful sound of recovery is the joyous racket that comes from an internal-combustion engine burning fossil fuels.”

Fishing in Gulf:

First segment

<http://www.abc.net.au/iview/#/view/1026533>

Pew Group spreads climate falsities. It's funded by major foundations pushing global governance on behalf of international bankers. It's aligned with Al Gore's unfounded climate claims. It behaves as an advocacy group camouflaged falsely as science-based. They ignore real-world empirical data and ignore practical people who know and understand the area and the issues. Did they void the science? Did they do a proper cost-benefit analysis?
